AutoCAD is one of the most popular drafting and design programs, is used by architects and civil engineers, and is a de facto standard for drafting and designing on Microsoft Windows, macOS and Linux computers. Read on for more information about how AutoCAD is used in business, education, engineering and more. Learning AutoCAD is not that expensive, and you can find many free tutorials to get you started. But learning AutoCAD takes time and effort, and you don't want to invest a lot of money if the program doesn't work for you, or if you can get better use out of a different program. Once the building model is produced, the modeler may want to import it into a 3D visualization program to show the model to potential customers and contractors. However, many architects and designers want to use CAD programs to design 3D models of their structures and plans. Most 3D CAD programs have a separate 2D drawing program for representing the drawings used in the design. For this reason, there are two types of CAD programs, a 2D CAD program and a 3D CAD program. In the early 1990s, the technical support of the architectural program, including data formats, file formats, and the tools used in the drafting, design, and management, was accomplished on an internal, proprietary platform. In this platform, the 3D data and 2D drawings were exported to CAD formats (e.g. DXF) and read back into the program. These data formats could not be imported or exported by the 2D CAD programs and vice versa. In 2001, the DGN+DUF was released, which could export and import most of the data formats that existed. Many 2D CAD programs could now import or export the new DGN+DUF data. However, the DGN+DUF had several drawbacks, such as a 2D drawing representation and limited data editing. In 2007, the STEP standard was released, which added a number of additional data formats, such as the ability to store multilevel files. The STEP standard was based on an earlier attempt to create an international standard called Open Design Alliance (ODA). In ODA, the DGN+DUF was extended by ODA for additional data a1d647c40b
