AutoCAD began life as a personal project for the original developers, but it quickly outgrew their limited resources, and in 1990 Autodesk decided to release AutoCAD as a commercial product. In the 1990s, the company introduced AutoCAD LT, a stripped down version of AutoCAD that could be run on a minicomputer or personal computer. In 2007, Autodesk also developed AutoCAD Web, a cloud-based version of AutoCAD that runs on the web. AutoCAD Web can be used by non-technical users to build a web application, with the data stored on a secure web server. AutoCAD and AutoCAD LT have always been able to read, but not write, the native file formats produced by other popular CAD programs, such as AutoCAD LT and AutoCAD Mx. In 2016, the company introduced AutoCAD WS, a Web-based version of AutoCAD that allows other CAD programs to produce files that can be opened in AutoCAD WS. AutoCAD is the most popular commercial CAD program and the second-most popular CAD program overall. With over 40 million users in 2017, AutoCAD is the most widely used commercial CAD program. The program has been ported to nearly every platform and operating system, and is available for use on a variety of hardware. AutoCAD 2016 is the latest version of the program, which came out in September 2016. Here is a comparison between older versions of AutoCAD and AutoCAD WS, along with AutoCAD LT and AutoCAD LT Web: Compare AutoCAD Versions To Autodesk CAD Want to check out AutoCAD but not sure if it's right for your business? Q: How to avoid getting a FormatException in the following if/else statement? In my main code I create a file name for the PDF that I am generating and output it to the hard drive. If the file already exists, I just want to keep the name the same (eg. filename\_test1.pdf). If the file does not exist, I want to create the file with the current timestamp. If the file exists and is not the latest file (ie. the file\_test2.pdf has been generated), I want to overwrite the existing file. If the file exists and is the latest file (ie. the file\_test1.pdf has been generated), I want to keep the old file name and just rename the new file to the old file name. I have a feeling that I am going about this the wrong way, but at the moment I cannot see another way to achieve this. I am writing the file to the hard drive like this: using (StreamWriter sw = new StreamWriter(Path.Combine(Path.GetTempPath(), fname), true)) { sw.WriteLine("Please wait..."); sw.Flush(); } I have this in my code: using (FileStream fstream = new FileStream(path, FileMode.OpenOrCreate)) { using (StreamWriter sw = new StreamWriter(fstream, Encoding.UTF8)) { sw.WriteLine("Test"); if (File.Exists(path)) { //This is where I am getting the FormatException if (File.GetLastWriteTime(

Revit Extensions: The Arranger tool enables building designs and establishing relationships between elements, and the ability to customize Revit components using Object Styles. Revit extensions for AutoCAD can now be created from within AutoCAD. (video: 7:13 min.) Simplified color palettes: The new color palettes allow for more colors in a palette window, and simplifies color selection from palettes. Grid, Smart Guide, Annotative and Mesh: Use a new unified grid system to help speed up your work. See the transition to a new Smart Guide format in the Architecture application. See a simplified Annotative tool to view and insert cross-section lines. And use Mesh to quickly create triangular facets. (videos: 2:18 min., 4:25 min.) Rotation angle attributes: AutoCAD now supports rotation angle attributes, allowing you to apply a common rotation to multiple entities. (video: 2:27 min.) Regenerative damping: Regenerative damping dynamically dampens rigid body simulation during solids and collision interactions. (video: 1:44 min.) New surface types: Paint options, mapping and 3D snap are now used in the surface creation process. A new create surface wizard helps you to quickly define and save surface types. (video: 1:55 min.) Dynamic Site Measurements: Assign a location and dimension to a Site Point, and automatically create a site line to indicate the location of the site. Use Dynamic Site Measurements to turn the site line on or off, as desired. (video: 1:21 min.) Auto Drafting: Use the new Drafting panel to easily adjust line width and color. Choose between three different line-width modes for faster, less-distracting drafting. And create drafts by changing line color, width and style as desired. (video: 1:42 min.)
